Instructions to run the project:

1. Open the project in eclipse
2. Set the Run-Time configurations by doing right click on project, then Run as -> Run Configurations.
3. Run Configuration will pop-up, where we can restrict the memory by following command in VM arguments. To do so, select the Main file under Java Application Menu on the left side, and then set the vm arguments as shown below.
-Xms[size]M
-Xmx[size]M

Example:-
-Xms10M
-Xmx10M

4. Then click Apply -> Run.
